EXPERIENCE

Eydora
California

Operations & Technical Program Coordinator
2026 — Present

A cognitive assistant that predicts product adoption, built on Ravi Sawhney's Psycho-Aesthetics® methodology across seven business disciplines. Rebranded from PA-AI in 2026.

- Own release quality for the staging platform: run structured QA passes, file and track defects to resolution, verify engineering fix claims against spec, and publish written summaries to engineering and leadership.
- Designed the Eydora marketing site end to end for the PA-AI rebrand — every page, layout and interaction my own — and moved it off Wix onto a fragment-based CMS.
- Authored a 19-requirement specification with working reference implementations to remediate slide-deck export defects, and ran 15 graded audit rounds on generator output quality across briefs, reports, and HTML decks.
- Led a 642-issue backlog remediation in Linear alongside the product lead — triage, status normalization, ownership labeling, and a three-contract reconciliation workbook.

Modern Faith Works
California

Founder & Full-Stack Engineer
2026 — Present

A registered 501(c)(3) non-profit documenting the history, art, and spirituality of Catholic churches, and shipping the app that does it.

- Built and shipped a cross-platform Catholic church guide and prayer app: one React Native and Expo codebase serving iOS, Android, and web on a Node, Express, and MongoDB backend, bilingual with CI-enforced locale parity.
- Designed an autonomous nightly release train that promotes staging to production only through green CI, then verifies its own deploys by commit hash, bundle rotation, and over-the-air runtime assertions.
- Gated 1,200+ automated tests in GitHub Actions behind branch protection, with custom pull-request checks for accessibility, structured data, locale parity, and 3D tour geometry.

NASA
UC Irvine, CA

Research Intern — Student Airborne Research Program
June 2024 — August 2024

- Processed and analyzed large atmospheric datasets with Python, Matplotlib, Pandas, and NumPy, generating the visualizations that supported the research findings.
- Designed and executed an independent research project on VOC composition and ozone formation potential, automating the statistical comparison of VOC levels and OH reactivity between 2014 and 2022.
- Used QGIS for geospatial analysis, mapping VOC concentrations over Long Beach and integrating environmental data for trend analysis.

SELECTED PROJECTS

Modern Faith Works · React Native, Expo, TypeScript, Node.js — A bilingual guide to Catholic churches: immersive interior walkthroughs over a map of 17,000+ US parishes, plus a daily practice layer, on iOS, Android, and web from one React Native codebase.

Wildfire Classifier · Python, YOLOv8, PyTorch, OpenCV — A YOLOv8 detection pipeline that finds fire and smoke in mountain camera footage and classifies the threat it is looking at.

C-like Language Interpreter · C++, DFA, Recursive Descent, LCRS Trees — A complete interpreter for a C-like language defined in Backus-Naur Form, built from the raw character stream up to a running program.

EDUCATION

Sonoma State University
Rohnert Park, CA

BS Computer Science · GPA 3.5
2020 — 2025

Dean's List, 2022 — 2025

Relevant coursework: Algorithms Analysis, Data Structures, Software Design and Development, Programming Languages, Operating Systems, Theory of Computation.

SKILLS

Languages: Python, TypeScript, JavaScript, C, C++, SQL, x86 Assembly

Data: Pandas, NumPy, Matplotlib, Jupyter, QGIS

Systems & Tools: Unix, Git, GitHub Actions, CI/CD, Sentry, Unreal Engine

Machine Learning: PyTorch, TensorFlow, Keras, scikit-learn, YOLOv8, OpenCV

Web & Mobile: React, React Native, Expo, Node.js, Express, MongoDB, Redis

Product Operations: Linear, Intercom, Stripe, PostHog, Freshsales, Vercel
